## CORPORATE PROFILE

# About Company

Established in **2016** and rooted in real estate stewardship, **UFIRM Technologies Private Limited** focuses on managing, maintaining, and enhancing estates with equal emphasis on **people, process, sustainability, and technology**. What began as a disciplined approach to managing built environments has steadily evolved into a forward-looking enterprise focused on operational excellence and long-term resilience.

Our philosophy places human well-being and environmental responsibility besides financial outcomes at our core. This positioning anchors every decision we make and guides the way we build partnerships, teams, and systems. By keeping this balance at the centre of our work, we strive to create enduring value for clients, communities, and stakeholders. In a market often driven by short-term gains, we remain committed to responsible, future-ready growth.

Today, the UFIRM Group stands as a trinity of enterprises, each distinct in purpose yet united by a shared philosophy. **UFIRM Estates** focuses on the sale, leasing, and professional management of real estate assets, helping property owners maximize value & ensure disciplined stewardship of their properties. **UREST** delivers integrated facility management and manpower services, supporting institutions and communities through reliable operations and service excellence. In 2025-26 we have launched the most awaited facility management technology- **FIRMITY**, the CMMS and HRMS platforms designed for facility owners, managers, and on-ground teams across housekeeping, engineering, and security, translating years of operational expertise into practical collaborative digital facility well-being.

Together, these enterprises represent our commitment to building institutions that endure — combining operational discipline, technological innovation, and a deep respect for the people who bring built environments to life.

---

## LEGACY THAT INFORMS US

# Our Roots

Built on a **25-year development legacy**, Ufirm inherits the operational discipline of the **Royal Nest Group**, responsible for over **8 million sq. ft.** across Delhi NCR, Jammu & Kashmir, Punjab, and Himachal Pradesh. This foundation drives a systems-led approach to facility management, grounded in clarity, comfort, and structural integrity. The same rigor applied to ongoing maintenance delivering consistent quality, is upheld collectively by the Ufirm team.

---

### A Defining Moment for India

India's commercial real estate is entering a decisive growth phase, projected at **~15–18% CAGR** through 2030—well above the global average. Facility management is advancing at **~12–14% CAGR**, driven by institutional ownership and demand for professional asset upkeep. The growth differential underscores a structural shift toward Asia, positioning India among the fastest-growing real estate markets globally.

---

### Where UFIRM Stands

Within this landscape, Ufirm's role is a natural extension of its development-led foundation. It translates a builder's precision into ongoing operational excellence, moving from creating spaces to sustaining their long-term value. As the market accelerates from construction toward lifecycle performance, Ufirm ensures that every asset continues to function as intended, delivering consistent returns and reliability well beyond handover.

## LEADERSHIP THAT GUIDES OUR FUTURE

## A Message

For over four decades in the Ministry of Home Affairs (MHA), discipline, integrity, and accountability weren't just values—they were a way of life. Honored with the President's Police Medal for distinguished service, those same principles now guide everything we do at Ufirm Technologies.

We're focused on building an organization that's structured, compliant, and trustworthy. As the real estate sector shifts from creation to long-term care, we believe disciplined facility management makes all the difference.

Progress takes time. Consistency builds trust. And keeping our stakeholders at the centre responsibly and purposefully, is how we grow.

*“Enduring institutions are built through discipline, and over time, consistency turns intent into trust.”*

**Dhruv Ji Handoo**

DIRECTOR – UFIRM TECHNOLOGIES

Over time, we've learned that real estate isn't just about building, it's about showing up, cycle after cycle, and delivering consistently. This discipline has made us a trusted, award-recognized developer. But more than recognition, it reminds us of our responsibility to every stakeholder, every project.

Experience also taught us that real value isn't just in creation, it's in long-term performance. That's why Ufirm Technologies came to life—to bring the same rigor to facility management and asset care.

As the sector grows more institutional, reliable and process driven partners matter more than ever. Our focus stays simple: build with – intent, operate with discipline, and make sure assets perform long after completion.

*“Reputation is built when commitments are met, consistently and without compromise. Over time, it is this consistency that becomes the foundation of trust.”*

**Vimal Kumar**

MANAGING DIRECTOR – ROYAL NEST GROUP

# 2025-26 AT A GLANCE

## FINANCIAL PERFORMANCE

### Sustained year-on-year revenue growth

- Sustained **70.89%** average year-on-year revenue growth over the past 3 years.
- EBITDA maintained at **4.22%**, with profits strategically reinvested into people, technology, and expansion.

## EMPLOYEE ENGAGEMENT

### Structured Recognition Framework

- Implemented a structured employee recognition framework across operations.
- Established the **USHA "Ray of Hope" Employee Fund Pool Trust** to support staff welfare during times of need.
- Maintained **100% compliance** with ESIC, PF, and payroll regulations across all deployments.
- Conducted PAN-India site-level reward and recognition programs.
- Delivered on-site, on-the-job, and classroom training programs to strengthen employee skills and service standards.

## UFIRM GROUP

### Group Highlights

- Forest View, Dharamshala (luxury group housing) nearing completion.
- Facilitated **₹100+ crore** sales; **~1.2 lakh sq. ft.** leasing across NCR, J&K, Himachal.
- **40+** clients added; **90%+** retention.
- **100%** compliance; GST recognition.
- Operations expanded to 3 new states

## ESTATE TECHNOLOGY AND CMMS

### FIRMITY: Tech Launch

- Commercial launch of our proprietary CMMS platform for intelligent estate and facility management.
- **50,000+** maintenance tasks logged and tracked through the platform.
- **2,500+** service complaints resolved with improved response transparency.
- QR-based asset tracking deployed for digital lifecycle management.
- Local technicians trained through online and on-site programs to drive digital adoption.
- Enabled seamless collaboration across property owners, facility managers, supervisors and service teams.

## GEOGRAPHIC FOOTPRINT

## Market presence

We continue to strengthen our footprint through a deliberate, cluster-led expansion strategy, enabling faster mobilization, deeper local presence, and consistent service quality. Today, we operate across 11 states and 2 Union Territories, managing over 300 sites nationwide. Our active presence spans Himachal Pradesh, Punjab, Rajasthan, Uttar Pradesh, Haryana, Gujarat, West Bengal, Maharashtra, Telangana, Odisha, Uttarakhand, and the Union Territories of Delhi, Jammu and Kashmir. This growing network is built for long-term sustainability, improving responsiveness, optimizing resources, and delivering reliable facility management at scale, wherever our clients need us.

**Build, Manage, and Maintain Estates**

## INTEGRATED ECOSYSTEM

# Three synergistic verticals

” *The future of construction and building management is integrated, data-driven, and stakeholder-centric. Through the synergy of Estates, IFM, and digital platforms, efficiency, transparency, and lifecycle excellence are delivered, thus ensuring every asset performs at its highest potential.*

## DEVELOPMENT AND ADVISORY

FY 2025–26 marked a period of steady progress for Ufirm Estates, building on prior momentum while advancing its role as an integrated platform spanning development, transactions, and community-level asset engagement.

A key milestone was the near completion of Forest View, a luxury group housing project in Dharamshala executed on a turnkey basis. Conceived, developed, and marketed in-house, it reflects a holistic approach—combining strong planning, location, and end-user experience against the backdrop of the Dhauladhar range.

On the transactional front, Ufirm Estates facilitated over ₹100 crore in residential sales and leased ~1.2 lakh sq. ft. across Himachal Pradesh, Jammu & Kashmir, and NCR—demonstrating consistent execution across markets. Seamless handovers further enabled structured transitions into facility management, supported by complete asset documentation to ensure long-term integrity.

*This mirrors India's broader formalization trend, with institutional investments reaching ₹72,000 crore in 2025. Ufirm Estates aligns with this shift through an integrated, execution-led model where development, sales, leasing, and facility management work as a single chain for long-term asset performance.*

## VISION AND DEVELOPMENT

# Building India's Future in the Lap of Nature

Mr. Anuj Handoo (fourth from the left,) with the Forest View, Dharamsala project team.

**Anuj Handoo**

DIRECTOR & PROJECT LEAD – UFIRM ESTATES

India's next phase of growth will not be defined by its metros alone. The future of a healthy, balanced, and sustainable India lies in its emerging Tier-2 and Tier-3 cities—where nature, resources, and opportunity coexist. Today, Tier-1 cities are witnessing increasing congestion, pollution, and pressure on infrastructure. In contrast, many smaller cities offer what the future demands—clean air, lower density, natural water resources, and expanding connectivity.

Supported by Government of India initiatives like the Smart Cities Mission and AMRUT Mission, over 500 cities are being upgraded with better roads, water supply, urban mobility, and civic infrastructure—making them ready for the next wave of growth.

At Ufirm Estates, this belief forms the foundation of our development philosophy. We are focused on creating integrated living environments in nature-rich locations where modern infrastructure meets ecological balance. Our first project, Royal Nest Forest View Dharamshala, stands as a testament to this vision. Nestled in the serene Dhauladhar ranges, it offers excellent connectivity by road and air, while being surrounded by protected forest land, ensuring that nature remains untouched.

*"We are not just building homes—we are contributing to a larger vision of India's future: balanced growth, sustainable living, and thriving communities beyond the metros."*

Building on this success, we are now planning our next development, once again in a nature-integrated location, designed with strict adherence to green building norms, energy efficiency, and sustainable resource management including water conservation and low-impact development practices.

We believe the next generation of India—entrepreneurs, professionals, and families will increasingly choose quality of life over congestion, and sustainability over density. Our role is to create the infrastructure that enables this shift.

## INTEGRATED FACILITY MANAGEMENT

The year under review reflects measured expansion for Urest IFM, driven by client growth and operational consistency. In FY 2025-26, over **40 new clients** were onboarded while maintaining **90%+ retention**, underscoring service reliability and client confidence.

Geographic expansion into Maharashtra, Odisha and Karnataka strengthened its multi-state presence, with a diversified client base across key sectors including hospitality, education, industry, residential, retail, and government.

Operationally, **100% compliance** across ESIC, EPF, and payroll frameworks was maintained, supported by a threefold workforce increase over three years, enhancing execution capability. Together, these developments position Urest IFM as a scalable and dependable platform.

*With 40% of office demand driven by global capability centres and rising adoption of IoT-led management, India's facilities are evolving into high-performance environments. Urest IFM supports this shift through structured systems, skilled workforce deployment, and lifecycle-focused maintenance aligned with global standards.*

## LEADERSHIP MESSAGE

## Beyond Maintenance

## S P Gurung

VP - SALES &amp; OPERATIONS

## Next Decade of IFM in India

Integrated Facilities Management in India is entering a defining decade. No longer just about maintenance, IFM is becoming a strategic function that impacts asset value, efficiency, and user experience. The Indian FM market, now over ₹1,68,000 crore, is growing at 10–12% CAGR—driven by urbanization, Grade-A real estate, and compliance needs.

Automation and digitization are now at the core. IoT and CAFM platforms enable real-time monitoring and predictive maintenance, cutting breakdowns by up to 30% and energy use by 15–20%. But the real transformation is in mindset: IFM must be seen as a value creator, not a cost centre.

While technology evolves, IFM remains people-driven; trained, accountable teams define service excellence. The future is intelligent, integrated and impact-driven.

*“ IFM must be seen not as a cost centre, but a value creator—enhancing experience, sustainability, and resilience.”*

“

## Ajay Kumar Yadav

FACILITY HEAD

## Lessons from the Field

Managing 1,000+ assets daily comes down to one thing: systems that actually work. In my experience, 60 to 70 percent of asset failures are preventable with structured maintenance. This saves downtime, extends life cycles, and keeps AMC costs under control. Without that, you are always firefighting.

I have learnt that real value is not in how well a building stands. It is in how well it runs five years later. That is the philosophy behind Ufirm Technologies, bringing development grade rigor to facility management and long term asset care.

As the industry gets more institutional, clients expect reliability over promises. My focus is straightforward. Operate with discipline, prioritize what matters, and make sure every asset performs not just today but years after handover.

*“ At 1,000+ assets, hope isn't a strategy. Data is!”*

## UREST PHILOSOPHY

# Sustainability & Growth

Our People–Planet–Profits philosophy guides every decision we make, from material choices and energy retrofits to workforce welfare and governance.

By aligning operational metrics with environmental and social outcomes, we ensure our communities are efficient, resilient, and positively impactful.

## People (Social)

2,100+ trained professionals. 100% site-team coverage through annual in-person alignment meets. Regular safety, equipment, digital tools, and emergency response training.

## Planet (Environment)

IoT sensors monitoring systems with real-time data. STP tracking for water management. Biodegradable chemicals and green certifications to reduce impact. Digitized logs to support compliance and reporting.

## Profit (Economic)

Retention driven by lower downtime, fewer breakdowns, and reduced AMC costs. Preventive maintenance cuts failures up to 30%. Energy use drop by 15–20% at IoT enabled sites. In-house execution improves margins with less waste and rework.

## UREST ECOLOGY

## Green Building Services

Water is India's most critical resource, and its responsible management cannot be an afterthought. At UFIRM, we treat water as a measurable asset—tracked, treated, and conserved across every site we manage

- We convert 50% of wet waste to compost, recycle 40%, and send only 10% to landfills. Compost is used in client landscapes.
- We partner with eco-friendly cleaning brands and use concentrated chemicals diluted on-site to reduce packaging waste.

UP TO **30%**

ENERGY SAVINGS

**Optimizing  
performance while  
minimizing  
environmental  
impact.**

- Our horticulture team designs native-species landscapes and urban forests that require minimal irrigation
- Our technical teams optimize HVAC, lighting and pumps. Sub-metering and real-time monitoring identify inefficiencies.

## UREST PROACTIVITY

## Our Green-Initiatives

At UFIRM, sustainability is not a separate agenda. It is embedded in how we manage facilities every day—across people, operations, and financial performance.

### Water Conservation Initiative

UFIRM collaborated with Ramveer Tanwar, widely recognized as **the Pond Man of India**, to drive an awareness-led initiative on water conservation across residential complexes in Greater Noida West. The collaboration focused on educating communities about the importance of water restoration and sustainable water management practices, including reuse of treated water through sewage treatment plants and effective rainwater harvesting within societies.

While highlighting ongoing pond rejuvenation efforts led by Ramveer Tanwar and his team, the campaign emphasized that meaningful impact requires active participation from every residential community. Through structured engagement sessions, residents were encouraged to take ownership of water conservation within their own premises. The initiative was well received and proved to be a successful step toward building community-driven responsibility for water sustainability.

### Waste to Compost Initiative

UFIRM's waste management division implements end-to-end waste segregation and processing across select residential societies in Noida. The team ensures scientific segregation of waste at source, where wet waste from kitchens and gardens is composted, while dry waste such as plastic and paper is routed for recycling. The compost generated is further utilized within the society gardens, creating a sustainable waste-to-resource cycle.

As part of its outreach, this operational model was demonstrated to students and teachers at **Billabong International High School**. Through practical sessions, the team explained how everyday kitchen waste is transformed into compost through systematic stages. Compost samples were also distributed among students as a learning takeaway, making the initiative an effective and engaging educational experience.

### Green-belt Initiative

UFIRM initiated the conversion of **6 acres** of under-utilized land in Greater Noida into a functional green belt. The land, previously vacant with sparse vegetation, was identified for ecological restoration. UFIRM submitted a structured proposal to local authorities outlining environmental benefits, and long-term maintenance protocol. Government permission was obtained following due process. Plantation was carried out as per the approved plan, with native trees and shrubs selected for the site. UFIRM continues to oversee maintenance in coordination with relevant stakeholders.

## VERTICAL OVERVIEW

FIRMITY is our proprietary Computerized Maintenance Management System (CMMS), developed from real on-ground facility operations to digitize and streamline estate management. It standardizes preventive maintenance, automates work orders, and centralizes asset registers, compliance schedules, and operational records for better visibility across facilities.

By replacing fragmented manual processes with centralized dashboards and automated workflows, FIRMITY enables structured monitoring of assets, service requests, and operational performance.

The platform supports a shift from reactive maintenance to proactive estate management—reducing downtime, extending asset lifecycles, improving service accountability, and ensuring regulatory compliance across operations.

### Operational Intelligence

- Asset Management
- Complaint Management
- Predictive Maintenance
- Inventory Management
- ....and more

## VERTICAL OVERVIEW

# Connected Operations

Developed by facility management professionals, FIRMITY is our CMMS platform designed to digitize and streamline estate operations. It standardizes preventive maintenance, complaint management, and operational reporting across facilities through a unified digital workflow.

FIRMITY operates through three role-based user environments, enabling seamless coordination between leadership, facility teams, and on-ground technicians with real-time visibility and execution.

## Client Dashboard

Designed for leadership and property stakeholders, the client dashboard provides a strategic view of facility performance—key metrics, asset health, maintenance trends, and compliance status—for informed oversight.

## Facility Manager Dashboard

Serves as the operational control centre for real-time monitoring of maintenance, complaints, and team performance—ensuring timely execution, compliance, and full visibility.

## Supervisor Interface

Enables technicians to receive tasks, update asset status via QR verification, resolve complaints, and submit photo-proof reports directly on-site—ensuring realtime tracking, faster execution, and accurate documentation.

## VERTICAL OVERVIEW

# Asset and Facility Operations

This integrated operational model enhances coordination, improves operational efficiency, and ensures process consistency across organizational functions. By digitizing operational infrastructure, organizations achieve greater process discipline, reduced operational friction, and enhanced service reliability across their operational footprint.

## Unified Asset Intelligence and Lifecycle Governance

1. Comprehensive digital asset lifecycle visibility.
2. Automated preventive and predictive maintenance scheduling.
3. Centralized asset records, compliance calendars, and maintenance histories.
4. Data-driven asset insights enabling informed capital planning and maintenance prioritization.

## Predictive Workflows and Operational Automation

1. Automated preventive maintenance planning and scheduling.
2. Centralized inventory monitoring and staff coordination.
3. Cloud-powered real-time operational access.

## VERTICAL OVERVIEW

# Scale, Reliability, and Control

FIRMITY serves as the digital foundation for scalable facility and asset management, enabling organizations to manage complex portfolios with precision and transparency. Its scalable architecture ensures seamless coordination, operational visibility, and consistent performance across distributed environments.

## Operational Efficiency Through Integrated Management

1. Asset lifecycle management and maintenance tracking.
2. Work order management and performance monitoring.
3. Inventory monitoring and procurement tracking.
4. Workforce attendance and operational reporting.
5. Visitor management and access records.

## Cloud-Native Architecture and Scalable Deployment

1. Secure cloud infrastructure for seamless access.
2. Open APIs and pre-built connectors
3. Scalable platform supporting enterprise portfolio governance.

## Enabling Long-Term Operational Value Creation

1. Real-time dashboards and analytics
2. Helps reduce unplanned downtime and extends asset lifespans.
3. Strengthens operational visibility, discipline, and reliability.
4. Structured reporting and trend analysis

## LEADERSHIP MESSAGE

# From Breakdowns to Breakthroughs

**Vikas Kaushik**

CTO- UFIRM

For years, facility management was reactive. A student in a hostel room called about a broken fan, a production line operator shouted across a noisy floor about an oil spill. Complaints were logged in registers, passed through supervisors, and lost in translation. Repairs happened late, cleaning happened inconsistently. And preventive maintenance was more of an intention than a schedule.

We decided to change that.

Across a 300-acre residential campus with 1,200 hostel rooms and 12,500 assets, we introduced a QR-based complaint system. A student scans a code in their room. The location is auto-captured. An electrician is assigned. A fan is repaired within hours—not days. Across a 60-acre manufacturing plant running three shifts, the same logic applies. An oil spill near a packing zone is reported by scanning a QR code. The nearest housekeeping staff is alerted. The spill is cleaned before it becomes a safety concern.

But quick fixes are only half the story. Real efficiency comes from preventing the breakdown altogether.

That is where IoT and AI enter. RFID tags and smart sensors now monitor pumps, motors, compressors, and HVAC systems in real time. A DG set or a lift tells us its health before it fails. Planned preventive maintenance shifts from a calendar-based guess to a condition-based certainty. And when a complaint does come in—"Oil spill near packing area"—AI automatically categorizes it, prioritizes it, and routes it. No manual selection, no delay, no confusion.

*“ Quick fixes keep things running today. Preventing the breakdown keeps them running next month, next year. That’s what we’re after.”*

The numbers speak for themselves. Faster complaint resolution. Reduced downtime. Improved safety. Better compliance. But beyond the metrics, the real transformation is simpler: we moved from chasing problems to owning outcomes.

Technology enables this shift. But people deliver it. Every scan, every alert, every resolved task is backed by a trained technician or a housekeeping staff member who now works with clarity and accountability. The system does not replace them—it empowers them.

At Ufirm, we believe that great facility management should be invisible. No frantic calls. No repeated issues. Just clean, safe, well-maintained spaces where students can learn and factories can produce without interruption.

That is the future we are building. Intelligent. Integrated. And quietly reliable

## SMART OPERATIONS

# IoT led Automation at Scale

UFIRM is transitioning from basic monitoring to IoT-led automation, initiated across two managed estates in Noida and Hyderabad, embedding intelligence directly into infrastructure. A structured network of sensors—covering electrical panels, DG systems, pumps, and water infrastructure—now captures real-time data on load behavior, vibration patterns, temperature variations, and flow dynamics. This is not a pilot in isolation. It is the beginning of a deliberate, scalable shift toward intelligent asset management.

**ELECTRICAL SYSTEMS**

DG runtime, load fluctuations, peak demand monitoring

**WATER INFRASTRUCTURE**

STP . inlet-outlet flow, dosing, performance tracking

**PUMP HEALTH**

Vibration and temperature signal analysis

**PREDICTIVE MAINTENANCE**

Anomaly detection, alerts, intervention guidance

These inputs are recorded and interpreted through our digital systems to trigger alerts, identify anomalies, and guide intervention. Metrics such as DG runtime and downtime, electrical load fluctuations, peak demand, STP inlet-outlet flow and dosing, and pump health (via vibration and temperature signals) have enabled a measurable shift from reactive breakdowns to predictive maintenance cycles. The result is fewer unexpected failures, longer asset life, and maintenance that happens before something breaks not after.

This year, several critical logs from sewage systems to electrical assets—have been digitized and standardized, enabling structured analysis and root cause tracking across facilities. What was once scattered across registers and memory is now visible, comparable, and actionable.

At select sites, the impact is tangible:

**MEASURED IMPACT****40%**

Reduction in unplanned downtime

**5.4**

MLD sewage monitored & reused daily

**100%**

Live data driven decisions

## SMART OPERATIONS

# Mechanization

Traditional facility management has long relied on manual effort. But effort alone does not guarantee consistency. This year, UFIRM made a conscious push toward mechanization increasing equipment-led operations by 18% across facility management and development activities. From ride-on scrubbers and industrial vacuum systems to boom lifts and mechanical aids for material handling, the shift is improving output quality, reducing fatigue, and strengthening site safety.

FY 2025 - 26 GROWTH

**Conscious increase in mechanized operations across facility management and development activities**

# 18%

YEAR OVER YEAR

### Facility Operations

- Ride-on scrubbers for uniform cleaning at scale
- Industrial vacuum systems for faster turnaround
- High-pressure jetting machines for hygiene standards

### Waste Handling

- Mechanized shredders for faster processing
- Composting units reducing disposal volume
- Significantly lower landfill dependency

### Technical Maintenance

- Drain & pipeline cleaning via jetting systems
- Façade maintenance using boom lifts
- Equipment handling through mechanical aids

### Development Projects

- Improved material movement efficiency
- Enhanced structural consistency
- Elevated site safety standards

## OPERATIONAL EXCELLENCE

# Transparency and Accountability

Detailed reporting and structured feedback loops ensure every task is tracked, every issue is resolved, and trust is continuously earned.

## Compliance

Regulatory discipline underpins all operations. Development projects are executed under RERA approvals with structured reporting and documented commitments delivered within defined frameworks. Financial governance is maintained through consistent statutory compliance, including GST, TDS, PF, and ESI, with zero deviation.

At the workforce level, all employees undergo police verification and reference checks prior to deployment. Payroll, benefits, and entitlements are administered with full transparency through employee access systems. Compliance is not procedural—it is foundational to trust, credibility, and continuity.

## Third party audits & Certifications

External validation is embedded into operations. Independent audits are conducted across safety, quality, and environmental parameters to ensure adherence to established standards. Certifications are maintained where applicable, and where in progress, status is transparently disclosed.

Gaps are not obscured. They are identified, addressed, and closed through defined remediation timelines—ensuring continuous improvement and operational integrity.

## Monthly Reports

Client accountability is institutionalized through a structured Monthly Management Report framework. Reports capture operational performance, service requests, resolutions, compliance updates, and forward action plans across all sites. For development projects, reporting extends to construction progress, regulatory status, and budget tracking. For operations, it includes training, escalations, complaints, and AMC tracking. Complete visibility is standard. Clients are informed of what has been delivered, what is in progress, and what is planned—ensuring transparency by design, not exception.

## 2025-26 PERFORMANCE

# Performance Highlights

Revenue grew 70.89 percent year on year. EBITDA stood at 4.22 percent. Employee base expanded 2.1 times. All three verticals contributed to this growth. Urest.in added new facility management contracts across manufacturing, education and residential sectors. Firmity.in transitioned from an internal tool to a commercial product. Ufirm.in maintained steady advisory and project development revenue.

## Cost Optimization

Improved EBITDA margins by 4.2% through cost-efficient resource allocation and operational streamlining.

## Key Performance Metrics

### Profitability

**4.22** +0.5%

EBITDA

### Employment

**2.1x**

Employment Increased

### Growth

**70.89%**

Revenue growth

Mechanized revenue growth outpaced traditional service revenue. Clients increasingly opted for technology-integrated facility management over standalone manpower contracts. Automation tools, IoT sensors and the CMMS platform drove this shift. Revenue from mechanized services grew 18%, reflecting changing client preferences.

We enhanced asset longevity, achieved full statutory compliance, and reduced ticket resolution times, underscoring UFIRM's commitment to excellence and stakeholder satisfaction.

Year-on-year comparisons show consistent upward movement across all key metrics. Revenue, EBITDA and headcount have all trended positive for three consecutive years. The growth is broad-based, not dependent on any single client or sector. This positions UFIRM well for continued expansion in the coming year.

## EMPOWERING OUR TEAM

## Investing in our People

File photo: UFIRM Annual Meet

At UFIRM, growth isn't about headcount. It's about whether the team actually performs when it matters. This year, we grew 2.1 times—from a smaller team to a much larger one spread across regions. Scaling that fast usually comes with people leaving, ours haven't. Our retention ratio has stayed high, not because we try hard to hold on, but because people find clarity and comfort here, and that matters more than any perk.

Every year, we bring our teams from across India together. No motivational speeches. Just a chance to realign on what we're actually doing and why. From leadership to the person on ground, everyone understands that our work touches the environment, the communities, the country, the company, and finally, ourselves, in that order.

***2.1x growth in team size, anchored by a retention rate that reflects genuine organizational stability.***

A workforce gets strong when people, systems, and direction line up. That's what we protect. That's how we grow. Not bigger for the sake of it, just better, together.

**Continuous Upskilling**

500+ training hours annually focused on technical skills, soft skills development, and safety drills to advance career pathways and adaptability.

**Safety & Compliance**

Zero-compromise approach to PPE integrity, full statutory benefits (PF/ESIC), transparent wage disbursement, and a commitment to 100% compliance record.

## MOTIVATED WORKFORCE

# Employee Recognition

Recognizing and rewarding exceptional individuals reinforces the standards that define our organization. Employees who consistently exceed expectations, demonstrate ownership, and contribute beyond their defined roles help shape a culture grounded in accountability, initiative, and professional pride. This recognition program ensures their efforts are formally acknowledged and their impact visibly valued.

## Award Criteria

We recognize employees monthly, quarterly, and annually across five core areas: technical excellence, safety compliance, innovation, teamwork, and customer satisfaction.

## Role Rewards

Technical staff get Tech of the Month and Precision Award. Housekeeping earns Spotless Star and Deep Clean Specialist. Horticulture receives Green Thumb and Water Steward. Security gets Vigilance Award and Visitor Experience Champion. Concierge earns Service Ambassador and Patient Care Excellence. Supervisors qualify for Mentor Award. Teams receive Team of the Quarter.

## Employee Growth

Recognition at UFIRM is a pathway to advancement. Consistent award winners are first in line for promotion. A technician becomes a senior technician. A senior technician becomes a team lead. A team lead becomes a site supervisor. We grow our own people.

**140+**  
EMPLOYEES  
AWARDED

**15%**  
INCREASE IN  
RETENTION

**★ 4.8/5**

EMPLOYEE SATISFACTION

“Recognition is the greatest motivator. Watching our team thrive and excel motivates us all to do better.”

## LEADING CHANGE

## Responsible Shift

Mr. Prakash Binjola (Urest Ex-CEO), Ms. Richu (Founder- Ufirm), Ms. Seema Arora (Dept. Director, CII)

When UFIRM was incorporated in 2016, the real estate services ecosystem—from construction support to facility management—was largely fragmented. Service quality depended on individuals and not systems. Compliance was inconsistent. Technology was often an afterthought. Most importantly, the dignity and long-term wellbeing of the workforce was not always at the center. We are on a mission to reshape this.

Today, expectations from the industry have evolved. Clients seek transparency and reliability. Employees seek respect and growth. Regulators demand accountability. Increasingly, there is a clear responsibility to operate in an environmentally conscious and sustainable manner. Technology is becoming the foundation for how buildings are delivered, managed, and experienced.

UFIRM is positioned at the intersection of these shifts. We integrate development, management, and digital systems to create a more responsible and future-ready real estate services ecosystem. Our approach is guided by a few clear beliefs.

- That ethical practices are non-negotiable.
- That sustainability must translate into measurable, on-ground action – reducing waste, optimizing resources, and improving environmental outcomes across sites.
- That technology should simplify and strengthen decision-making.
- And that people, especially the frontline workforce, deserve dignity, structure, and pride in their work.

**“ There’s no single moment that defines this work—just consistent execution, across sites, across teams, over time.**

The path ahead will bring scale, new geographies, and new technologies. But the direction remains unchanged. To consistently raise the standard of real estate services through integration, responsibility, and sustainable thinking.

There is no single defining moment – only consistent execution, across sites and teams, over time. Not louder. Not faster. But better. Step by step, building by building, with people, planet, and purpose at the core.

## FUTURE VISION

## Looking Ahead – 2026 and beyond

UFIRM's next phase is organized around three priorities: automation, geographic expansion, and measurable performance improvement. These goals are not aspirations. They are operational targets with defined timelines and measurable outcomes.

## UFIRM Estates

BUILD

Driving growth through deeper automation, wider reach, and stronger people practices—expanding into Tier-2 cities, scaling the workforce by 1.5x while maintaining attrition below 15%, and standardizing development through data-led design and execution frameworks.

## Urest

PEOPLE

Refining disbursement processes to improve welfare fund accessibility. Onboarding 10 new institutional clients annually. Retaining preventive maintenance compliance to 90%+.

## FIRMITY CMMS

TECHNOLOGY

Launching mobile-first version for field teams by Q3. Integrating AI-based complaint categorization across all modules. Enhancing offline connectivity for critical functions.

## Sustainability

PLANET

Striving for <10% landfill diversion by 2027. Launching pro bono horticulture consultations. Conducting solar power feasibility studies at large campuses.

## EMPLOYEE HIGHLIGHTS

## Our Editorial Team

### **Ms. Richu**

Chief editor/ Team lead (Founder UFIRM)

This edition quietly reflects the collective effort behind both capturing our year's achievements and bringing this magazine to life. The journey of creating it has been as meaningful as what it showcases. As we close this chapter, there is a growing sense of excitement for what we will build and share together next year

---

### **Aadam Ahmad**

Lead Researcher (Senior Developer)

This newsletter reflects more than updates, it brings together the thinking, effort, and intent behind what we do. It's a snapshot of how we're evolving, questioning, and improving. As we move forward, the aim is to keep this voice honest, relevant, and truly representative of our journey.

### **Ms. Marooj**

Visual director/ Layout Artist (UI/UX Designer)

Putting this report together brought our journey at UFIRM into sharp focus. Page by page, the scale of what we have achieved and the clarity of what we aspire to build became evident. It was a privilege to shape this story visually.
